- Changes req:
NO UI designing. It looks like a 5 years old made a ui whereas I asked you to make a 6 figure earning design for a website
- no logo was used and no nav bar. The navbar must include home menu our story what make us diff. Reservation buttons or links to go through the system
- Poor cta with description was used.
- There must be some animation and transitions b/w pages and then on each page there must be some actions as user scroll on screen which make user spend time on site

- Only one image per item where shown. Reduce some items of menu acc. To cuisine but display most selling items on top and a button of explore menu and when user explore menu there he see cards of item with price description image and a add 5 star review option. you can use grid for cards display
- There must be a nav bar with cta then section of most selling items and a section of make a reservation cta testimonials and footer. The about section must be on its respective page, story page must include its own data so far and so forth.
- The menu section must include the headings with starter etc and then from there user must visit the whole menu
- Location of restaurant is jalal pur jattan gujrat pakistan
- Remove the “zero-commission booking” and add some other words
- No physical hierarchy of booking a table is used so how can I check either it is working you can use the sample data on your own and check either the booking system works or not
- As I pressed confirm table button a failed to fetch pop up appears
- Use a light color theme for ui designing so that the site look rich and expensive which reflect your ability to design a wholly breathtaking site.
